

>>Entry Name: Aluminium strontium oxide (Al_2SrO_4)

CAS Registry Number: 12004-37-4

SrAl_2O_4

Molecular Formula: $\text{Al}_2\text{O}_4\text{Sr}$

Molecular Weight: 205.581

Accurate Mass: 205.848357

Percentage Composition: Al 26.25%; O 31.13%; Sr 42.62%

Source/Synthesis: Synth. from Al_2O_3 and SrCO_3 at 1200°

Use/Importance: Support for lanthanide phosphors

Physical Description: Colourless cryst. (melt)

Other Data: Phase transition occurs at 650° . Related compd. Al_4SrO_7 also descr.
