

>>Entry Name: Molybdenum

CAS Registry Number: 7439-98-7

Related CAS Registry Numbers(s): 16065-87-5 16727-12-1 21175-08-6 22541-84-0 22541-86-2 23267-94-9 54687-18-2

Mo

Molecular Formula: Mo

Molecular Weight: 95.94

Accurate Mass: 97.905406

Percentage Composition: Mo 100.00%

spectroscopy. Discovered by P.J. Hjelm (Uppsala) in 1781. Has bcc (A2 type) struct. Abundance: 1.2 ppm (earth's crust), 0.01 ppm (sea water)

Source/Synthesis: Main ore is molybdenite (MoS₂), but wulfenite and powellite are also important. Sulfide roasted to MoO₃. Metal obt. by H₂ reduction of oxide, or by aluminothermal process. Also obt. as a by-product of Cu production. Normally obt. in powder form

Use/Importance: Has essential biological role. Alloying element in steels; imparts strength, toughness and wear resistance (most important use). Used in electric and electronic parts e.g. heaters of vacuum tubes. Deposited as thin layer on metals e.g. aluminium to produce friction and wear-resistant surface

Physical Description: Lustrous, silver white appearance in massive state; dull grey as powder. Fairly soft when pure. Less reactive than Cr to acids. Combines with O₂ on heating to give MoO₃

Melting Point: Mp 2626°

Boiling Point: Bp 5560° (4610°)

Hazard & Toxicity: Toxic

Aldrich: 35720-0

Fluka: 69840

Sigma: M8260

>>Variant: Molybdenum 90

CAS Registry Number: 15690-77-4

Source/Synthesis: Prod. from Nb (p,4n), or ⁹⁰Zr (α,4n)

Other Data: *I* = +0. Decays by orbital electron capture, or β⁽⁺⁾ emission to ⁹⁰Nb

>>Variant: Molybdenum 91

CAS Registry Number: 14682-99-6

Source/Synthesis: Prod. by Mo (p,d), or Mo (n,2n)

Other Data: *I* = + 9/2 . Decays by orbital electron capture or β⁽⁺⁾ emission to ⁹¹Nb. There is also an isomer ^{91m}Mo, *t*_{1/2} 1.087 min.

>>Variant: Molybdenum 92

CAS Registry Number: 14191-67-4

Other Data: *I* = +0

>>Variant: Molybdenum 93

CAS Registry Number: 14119-13-2

Source/Synthesis: Prod. from Mo (n,γ), or ⁹³Nb (p,n)

Other Data: *I* = + 5/2 . Decays by orbital electron capture to ⁹³Nb

>>Variant: Molybdenum 93m

Source/Synthesis: Prod. from Nb (d,2n), ⁹⁰Zr (α,n), ⁹³Nb (p,n), or ⁹²Zr (α,3n)

Other Data: *I* = +²¹/₂; μ = +9.21 μN. Decays by isomeric transition to ⁹³Mo

>>Variant: Molybdenum 94

CAS Registry Number: 14683-00-2

Other Data: *I* = +0

>>Variant: Molybdenum 95
