

>>Entry Name: Titanium phosphides

CAS Registry Number: 12712-91-3

Related CAS Registry Numbers(s): 12202-49-2 71587-34-3 83295-31-2

Molecular Formula: [PTi]

>>Variant: Titanium phosphide (Ti₃P), 11Cl

CAS Registry Number: 12037-66-0

Molecular Formula: PTi₃

Molecular Weight: 174.614

Accurate Mass: 174.817603

Percentage Composition: P 17.74%; Ti 82.26%

Source/Synthesis: Synth. by heating Ti and red P in a sealed tube at 850°, arc-melting and annealing the product or by burning Ti in red P

>>Variant: Titanium phosphide (Ti₅P₃), 11Cl

CAS Registry Number: 12037-81-9

Molecular Formula: P₃Ti₅

Molecular Weight: 332.321

Accurate Mass: 332.661021

Percentage Composition: P 27.96%; Ti 72.04%

Source/Synthesis: Synth. from a melt of Cu, Ti and red P and removing the Cu matrix with HNO₃ or by arc-melting Ti and red P

>>Variant: Titanium phosphide (TiP), 11Cl

CAS Registry Number: 12037-65-9

Molecular Formula: PTi

Molecular Weight: 78.854

Accurate Mass: 78.921709

Percentage Composition: P 39.28%; Ti 60.72%

layers giving a P sequence ACBCACBC

Source/Synthesis: Synth. by heating Ti and red P; or by stirring a mixt. of TiCl₄ and Na₃P at r.t.; ignition occurs and NaCl may be extracted from the product

Physical Description: Both Ti-rich and P-rich phases may be obt.

>>Variant: Titanium phosphide (TiP₂), 11Cl

CAS Registry Number: 12037-76-2

Molecular Formula: P₂Ti

Molecular Weight: 109.827

Accurate Mass: 109.895471

Percentage Composition: P 56.40%; Ti 43.60%

Source/Synthesis: Synth. by heating the elements in a sealed tube, arc-melting then annealing the product or by heating the elements or TiP and P to 550°
