

>>Entry Name: Copper

Synonym(s): Cuprum (L.)

CAS Registry Number: 7440-50-8

Related CAS Registry Numbers(s): 12190-70-4 15158-11-9 15721-63-8 17493-86-6 19498-52-3 37366-57-7 39417-05-5 65357-62-2 66771-03-7 66771-05-9 68112-39-0 81543-63-7 81543-64-8

Cu

Molecular Formula: Cu

Molecular Weight: 63.546

Accurate Mass: 62.939598

Percentage Composition: Cu 100.00%

General Statement: Atomic No. 29. Ground state electron config. [Ar]3d<sup>10</sup>4s<sup>1</sup>. Known since *ca.* 5000 BC. 11 Isotopes are known of which <sup>63</sup>Cu and <sup>65</sup>Cu are natural, and useful in nmr spectroscopy. Abundance: 68 ppm (earth's crust), 0.003 ppm (sea water). Fcc struct. (A1 type)

Source/Synthesis: Occurs as natural metal; as oxides e.g. cuprite (Cu<sub>2</sub>O), tenorite (CuO); malachite (basic carbonate); and as sulfides e.g. chalcocite (Cu<sub>2</sub>S), covellite (CuS), chalcopyrite (main ore, CuFeS<sub>2</sub>). Direct smelting v. rare. Ores concd. by flotation, S removed as SO<sub>2</sub> by roasting, and oxides reduced by CO or H<sub>2</sub>. Metal refined electrolytically

Use/Importance: Excellent electrical and thermal conductor, and used mainly in electrical equipment. Essential trace element. Constit. of historically important alloys.

Reagent for the cyclisation and/or coupling of various functional groups, decarboxylation, preparation of  $\alpha$ -alkynic alcohols, cyclopropanes, nitriles and ketones by benzylic oxidn.

Physical Description: Reddish, malleable and ductile metal. Slowly weathers to green patina of the carbonate

Melting Point: Mp 1083°

Boiling Point: Bp 2595° (2570°)

Other Data: Stable in dry air at r.t. At red heat → Cu<sub>2</sub>O. Attacked by S, and by halogens. Reactive to hot conc. H<sub>2</sub>SO<sub>4</sub>, and dil. HNO<sub>3</sub>. Resistant to H<sub>2</sub>O

Hazard & Toxicity: Toxic in excess

Aldrich: 36532-7

Fluka: 61144

>>Variant: Copper 59

CAS Registry Number: 15128-02-6

General Statement: Radioactive, *t*<sub>1/2</sub> 1.358 min.

Source/Synthesis: Prod. from <sup>58</sup>Ni (p,γ), or <sup>58</sup>Ni (d,n)

Other Data: *I* = - 3/2 . Decays by orbital electron capture or β<sup>(+)</sup> emission to <sup>59</sup>Ni

>>Variant: Copper 60

CAS Registry Number: 13982-06-4

General Statement: Radioactive, *t*<sub>1/2</sub> 23.2 min.

Source/Synthesis: Prod. from <sup>60</sup>Ni (p,n), or <sup>60</sup>Ni (d,2n)

Other Data: *I* = +2; μ = +1.219 μ<sub>N</sub>. Decays by orbital electron capture or β<sup>(+)</sup> emission to <sup>60</sup>Ni

>>Variant: Copper 61

CAS Registry Number: 15128-03-7

General Statement: Radioactive, *t*<sub>1/2</sub> 3.408 h

Source/Synthesis: Prod. from <sup>60</sup>Ni (d,n), <sup>63</sup>Cu (γ,2n), or <sup>59</sup>Co (α,2n)

Other Data: *I* = - 3/2 ; μ = +2.14 μ<sub>N</sub>. Decays by orbital electron capture or β<sup>(+)</sup> emission to <sup>61</sup>Ni

>>Variant: Copper 62

CAS Registry Number: 14276-53-0

General Statement: Radioactive, *t*<sub>1/2</sub> 9.74 min.

Source/Synthesis: Prod. from <sup>59</sup>Co (α,n), or <sup>62</sup>Ni (p,n). Daughter of <sup>62</sup>Zn

Other Data: *I* = +1; μ = -0.380 μ<sub>N</sub>. Decays by orbital electron capture or β<sup>(+)</sup> emission to <sup>62</sup>Ni

>>Variant: Copper 63

CAS Registry Number: 14191-84-5

General Statement: Stable. Natural abundance 69.24-68.98 atom %

Other Data: *I* = - 3/2 ; μ = +2.2233 μ<sub>N</sub>. Nmr relative sensitivity (<sup>1</sup>H=1.00) 0.0931; receptivity (<sup>13</sup>C=1.00) 365
