

>>Entry Name: **Diammonium sulfite**, 9CI

Synonym(s): Ammonium sulfite

CAS Registry Number: 10196-04-0

(NH₄)₂SO₃

Molecular Formula: H₈N₂O₃S

Molecular Weight: 116.141

Accurate Mass: 116.025563

Percentage Composition: H 6.94%; N 24.12%; O 41.33%; S 27.61%

Source/Synthesis: Formed by dehydration of the monohydrate in a desiccator

Physical Description: V. deliquescent cryst.

Boiling Point: Subl. 150°

>>Derivative: Monohydrate

CAS Registry Number: 7783-11-1

Molecular Formula: H₁₀N₂O₄S

Molecular Weight: 134.156

Accurate Mass: 134.036128

Percentage Composition: H 7.51%; N 20.88%; O 47.70%; S 23.90%

Source/Synthesis: Synth. by passing SO₂ into aq. NH₃

Physical Description: Efflorescent cryst.

Solubility: Sol. H₂O; insol, EtOH, Me₂CO
